

**QUANTUM PHYSICS AND PSYCHOANALYSIS:
The Influence of Spirituality on Physical and Mental Health**
Assis, D.

(Clitop – Associação Cultural, Centro de Estudos e Tratamento em Saúde Mental –
Cultural Association, Center of Mental Health Study and Treatment, Rio de Janeiro, RJ)

Introduction: Is it possible to establish a connection between Physics (the Science that studies the properties of matter, the laws that can change its state or movement without changing its essence) and Psychoanalysis, which studies the man, the mind, the psychic? What kind of relationship might exist between apparently such different and divergent topics? Quantum Physics has been revolutionizing the world and today its object of study is the human mind. From the discoveries of this New Physics, it is possible to establish a relationship with Psychoanalysis especially regarding Conversion Hysteria, Freud's first object of study, the concepts of transference, psychic energy, atemporality of the unconscious, altered states of the consciousness and thought transmission. The latter, one of the topics approached by Freud in his work, today is part of spirituality and Physics-oriented research.

Objectives: The first objective of this work is to reach the branch of the scientific community which still refuses to take into consideration spirituality, mainly in severe cases of mental illness. The second objective is to seek a reflection of its need and more urgently to create an exchange of knowledge and discoveries, with the purpose of putting together the pieces of this puzzle, that is, finding Man's place in time, space and History, the origin and cause of psychic suffering in its real essence (particularly in the cases of mental illness) and to expand the horizons and the perception of the incredible capacity of the human mind when facing the infinite possibilities of creation.

Presentation: To expose the questions raised by Freud, with the purpose of proving them, along the years, through scientific discoveries that should be taken into consideration, excluding any relationship with mysticism. To expose scientific ideas and formulations of some internationally acclaimed physicists, such as Amit Goswami (with scientific proof of reincarnation), Fred Alan Wolf, Deepak Chopra and psychiatrist Ian Stevenson, who dedicated his life to investigating reported cases of reincarnation and how facts that took place in previous lives interfere with the psychic structure of an individual.

Keywords: Physics, Psychoanalysis, Spirituality
